OPC Router

Software toolbox™
OPC Router Preferred Partner US & Canada

Connectivity to third-party systems
with modern Middleware

The OPC Router is a software solution that connects your machines and systems. It collects data, merges them and makes them available at the right place and time. Due to its Plug-ins, many systems can be connected, from controllers, printers, RFID and barcode scanners to databases, cloud and office systems, as well as ERP software such as SAP. Connecting these individual system components is done via drag & drop on a graphical interface - without programming knowledge. As a result, you get a lively and independently operating Industry 4.0 system.
